Nov. 23, 1904

More of Romero  
near which were Prairie  
Dogs. Scattered villages  
all the way from near  
Romero to Hebron, al-  
though the waters were  
thickly coated with ice  
the dogs were out sun-  
ning themselves.

East of Romero I saw  
2 *Pipilo crissalis* &  
one Long-crested Jay  
Many Ravens, a dark  
*Archibuteo*, Shore Larks  
At Hebron saw the  
first Magpie.

1 flock of Cowbirds  
(8) at Culmar, N. 2a.

Magpie and  
*Caprimulgus frontalis*  
seen at Earl, Colo.  
Nests and nests seen  
on both sides of River,  
Utah. divide.

Reached Syracuse at  
dusk. Prairie Dogs  
seen east to Coolidge  
Large flocks of Red-wing  
Blackbirds between  
La Junta and Syracuse  
Big flocks of *Otocoris*  
everywhere

Pigeon Hawk at La Junta

Nov. 24, 1904, - Crossed  
Missouri from Kansas City  
to St. Louis. Saw a Hawk  
Bobwhites, Bluebirds,  
Juncos, Crows, English  
Sparrows, Red-tailed Hawk

The Maoma, McPherson  
Ave., + Kings Highway

Oct. 10, 1904

A Blue-faced Booby  
flew around the ship.  
Its plumage was white  
except black remiges  
and nearly all black  
rectrices. Bill apparently  
straw color. Face bluish.  
A fine large bird.  
It dashed to the  
water and caught  
several fish, decidedly  
at about this  
angle. Sula  
cranops.

The Golden Plover  
was still flying feebly  
around the ship at 5 P.M.  
At 6 P.M., dark the  
poor Plover still was

fluttering along side.

October 11, 1904.

No bird was seen  
in the morning save  
a "white Gull," which I  
did not see myself.

About noon a pair  
of Black-footed Albatrosses  
joined us and remained.  
Golden Plover has disappeared.

October 12, 1904.

This morning only the  
two Albatrosses are  
with us.

Oct. 13

Three Albatrosses. No other  
birds.

a Turnstone flew around and over the ship several times.

A Golden Plover accompanied the ship and probably came aboard.

White-breasted Shearwaters were rather scarce.

October 10, 1904.

The Golden Plover still follows the ship occasionally, circling around and over it, fly close alongside at times and whistle plaintively. It seems very weak and tired. Once it flew out of sight and rose very high but soon returned.

Oct. 8, 1904. - Landed

Oct. 4, 1904.

Pack Mail  
Fort A. Smith  
Montana

at Honolulu, H. I., at 10 A.M., and remained until five ashore.

Acridotheres tristis

(Linnaeus). False Minn.

Passer domesticus Linnaeus.

European House Sparrow.

Turtur chinensis

(Scopoli), Chinese Turtle Dove.

I saw many of the above three species, all of them introduced.

October 9, 1904. - Left Honolulu at 5:30 P.M. yesterday. This morning several small white & breasted sea birds were the only birds seen during early afternoon

Oct. 4, 1904. - A bird circled around the ship several times which even the ship's officers said was a Duck. I did not see it.

In the afternoon a small Curlew and two ~~Godwits~~ <sup>Golden Plover</sup> followed the ship, whirling as they flew. During brief squalls they close along our lee almost against the ship. The large Petrel grows scarce, and Shearwaters are getting more numerous. One Frigate Bird seen. No Gulls or Terns

seen since we left Japan.

October 5, 1904. - Few if any Petrels seen. Plenty of Shearwaters. A few Boobies. One Frigate Bird.

Two ~~Godwits~~ <sup>readers</sup>, perhaps the same two Godwits seen yesterday flew around the ship many times, again coming in close under our lee side to escape during squally flurries.

1<sup>st</sup> Officer of the  
"Logan" says that  
birds not infrequently  
come aboard, tho'  
not on every passage.

The birds he remem-  
bered are Albatross,  
Booby, Storm Petrel,  
and a small bird "like  
a Rice Bird" (off Japan),  
besides those of this trip.

Oct. 2, 1904, a Whale  
was seen spouting.

H. H. Brewer  
Commander U.S.N.  
Oct. 2, 1904

October 4, 1904.

A good many Petrels  
have been seen during  
the day. There were two  
species a large <sup>(Shearwater)</sup> and small  
<sup>(Petrel)</sup> one; One of the large  
ones came aboard ship  
at dusk:—

No. 13737, Petrel ♂ ad.

Right wing  
Shearwater (No. 13737).

C. P. Brewster.  
M. A. S. "Logan"

Size of Golden Plover,  
plain gray above  
white below with  
a white line beginning  
at the bill, passing  
through and beyond  
the eye thus:

Eyes prominent.

Oct. 4, 1904. - To-day  
Shearwaters, Petrels,  
Albatrosses, and  
Boobies are with us.  
The Midway Islands  
were passed at 4 a.m.

The Boobies fly  
close around the ship.  
Head, neck, & upperparts  
dark; underparts and  
neck-ring white. Bill  
apparently white. Ap-  
-peared to want to  
settle on the ship.  
Could not see color of face.

Plenty of Petrels  
like No. 13 & 37 all  
day, skimming the  
water with Shearwaters

half of toes and webs,  
flesh color; distal  
half of webs and toes,  
and all of <sup>claws</sup> nails, black.

Lining of wings all  
white on humeral joint;  
on 2 rows of greater  
coverts of forearm joint;  
and with one row of  
great coverts of carpal  
joint white shot with  
gray.

A good many of  
these birds have  
joined the ship; or,  
rather, we seem to  
~~be~~ crossing the  
feeding ground of its  
species.

Note. - The Wader  
that came <sup>aboard</sup> ashore  
September 27, two days  
after passing the last of  
the outlying islands of the  
Japan Archipelago, lit  
on the railings, and was  
picked up by hand and  
put in a stateroom,  
whence it escaped  
by a porthole and  
settled on another  
part of the ship.

Mr. J. P. Brewster  
thus describes it:  
A long-legged wader  
having yellow legs  
and feet; a long (2 inches)  
black bill   
slightly arched.

Island. It is very high, steep, rocky, and rather barren.

No trees could be distinguished; but the whole top of the island was green. and bushes could be made out. There seemed to be plenty of grass. Perhaps 2 miles in diameter and 400 miles off the Asiatic coast. The other island is said to be much larger. Probably no inhabitants.

Oct 3, 1904. - Petrel

Oct. 3, 1904

Heavy muscle inserted in carpal fascia. Came aboard the U.S.A. Transport "Logan".

Lat  $29^{\circ} - 22' N.$  } 200 m.  
Long.  $177^{\circ} - 59' E.$  } west of  
Hawaii  
Island

363; 770; 227; 133; 25.5;  
30; 35. Depth of bill in  
front of tubular process,  
8.5; diameter of eye, 8;  
bare portion of tibia, 14.  
Iris dark brown. Bill black.  
Tarsi & bare portion of  
tibia, and basal half

a few small ones  
like our piping plover.

Sept. 26, 1904. - A few  
dusky Shearwaters  
dusky above, white below.

Sept. 27, 1904. - Dusky  
Shearwaters. A Wader  
size of Golden Plover  
came aboard. I did not  
see it, but it was  
described to me as white  
below, gray above,  
pop-eyed, with <sup>2 in. long</sup> dark bill  
yellow legs and feet.  
White line from bill over eye.  
It remained on  
the ship a day and  
then disappeared.

(See Oct. 2, later)

October 3, 1904.

A few Dusky Shearwaters  
were seen daily until  
Oct. 1st. Then no bird  
until to-day, when  
one Albatross appeared  
early in the morning.  
At ten A.M. there were  
two; at 4 P.M. three.

~~On Sept. 25 we  
passed between two  
islands - the last of  
the Japan Archipelago.  
The one on our left  
was not in sight; but  
we got a good view  
of the one on our right  
which is called  
Ikosimi or Swan~~

Small Flycatchers  
Hornbills skimming over  
the ricefields. A large  
Eel caught by jirrikash  
men, and cooked for  
us at tea house.  
Lava fe. - Haw-eh.

Sept. 21, 1904

Left at 6:30. Breakfast  
= last 7. With Dr. McE,  
Cowan took jirrikash  
with 2 men and  
crossed the mountain  
to Mogi. Collected  
Crabs, shells, etc. Saw  
Yellow-breasted Budytes  
Crows, Tree Sparrows.  
Returning from Mogi,  
we stopped our jirrikash  
at a bridge and followed  
a stream up into the hills  
to the left. Fresh-water  
shells and Crabs were  
abundant; and there  
were many Frogs, some  
smooth, some rough, and

Sept. 20, 1904.

Sept. 21, 1904.

Slept at Nagasaki Hotel.

Took 8:20 train Onmura  
when jinrikisha men took  
us to the temple—a forti-  
fied place on which the  
temple stands surrounded  
by trees & shrubbery—  
pine, cypress, juniper,  
suet, & tall deciduous  
trees, in which I saw  
Crows, Hawks,

Blue-gray black-collared  
Titmouse, long skinned  
Budytes-like bird with  
black stripe from chest  
to tip of under side of  
tail. Many Passer  
& birds like Dendroica pinus

Sept. 16, 1904. - At sea.

With. No birds seen all day. The morning was a haze of what I at 8:30 P.M. saw the light house on the M. ~~disappearing~~

Sept. 17, 1904. - Island of Formosa, which is high, rough, forested with many grassy openings, especially on the slopes near the sea. On M. Formosa saw one Sterna bergii, the only bird seen since leaving Manila.  
Sept. 17, 1904. at sea.

Sept. 18, 1904. - At sea. Several (see Sula), dark above, pure white below, yellow bill & face. Flocks to right & left ship.

Sept. 18, 1904. - At sea. Several (see Sula), dark above, pure white below, yellow bill & face. Flocks to right & left ship. Sterna bergii seen in flocks.

Passed to left of small islands

Sept. 19, 1904. at sea

R.R. Nagasaki to Moji  
Morning train to Amakusa  
8:15; 8:20; 9:45

Returned at 2:20; 4:04; 6:05

Reached Nagasaki 3:55; 5:38 &

7:40

Thurs. P. M. Sept. 15, 1904.

Spent the morning at the  
Hospital at 8 A.M. Spent  
two hours in the museum  
of the Decatur  
College, Iowa. (Sept. 15, 1904)  
10:30 A.M. - 12:30 P.M.  
12:30 P.M. - 1:30 P.M.  
Until 12:30. was busy  
writing letters to friends  
✓ in the afternoon. Claudia  
dressed me with banded  
wings. Hundreds of Green  
Warblers (Parus montanus).  
✓ Large dark birds with  
black tail & white spot  
on the wing. Had an entry  
in the book. (Sept. 15, 1904)  
Co. side the river. (at

evening. These species  
assembled in noisy  
flocks in trees. Parus  
montanus rattled  
from overhead wires.

✓ In the bay are  
flocks of White-headed  
Kites.

✓ High winds of the afternoon  
ruled. A large bird flying  
at bit of road thrown  
from the dining room.

puller. (Sept. 15, 1904)  
at 3:30 P.M. Passed

✓ 3:30 P.M. Passed  
Hawthorn Island and  
Hawthorn before dark  
No birds seen.

Slept well. (Sept. 15, 1904)
